EDUCATION

CSMSS, Chh. Shahu College of Engineering

B.Tech, Artificial Intelligence & Data Science | CGPA: 7.2/10

Chh. Sambhajinagar, Maharashtra

Aug, 2023 - Present

Kulbhushan Jr. College, Chh. Sambhajinagar | HSC (PCMB): 76.33%

2022

Little Flower High School, Chh. Sambhajinagar | SSC: 91.40%

2020

TECHNICAL SKILLS

Languages:	Python, SQL, HTML, CSS, Javascript
ML & Deep Learning:	Computer Vision, Time-Series Forecasting, Supervised/Unsupervised, Fine-Tuning
LLMs / GenAI:	Transformers (GPT/BERT, Hugging Face), Ollama, Embeddings, Prompt Engineering, Agentic Workflows, NLP
Frameworks & Libraries:	PyTorch, TensorFlow, Streamlit, Flask, Scikit-Learn, Pandas, Numpy, NLTK, OpenCV
Data & Database:	Data Preprocessing, Feature Engineering, MySQL, MongoDB
Deployment & Tools:	Docker, Kubernetes (MiniKube), Git/Github, Linux/CLI

PROJECTS

Log Analyzer | Python, FastAPI, PostgreSQL, SQLAlchemy, Streamlit, Plotly, Kubernetes, Docker, Ollama

- Built a full-stack Python platform with a **FastAPI REST API**, **SQLAlchemy ORM-backed PostgreSQL** database, and real-time Streamlit dashboard to deliver autonomous observability and self-healing across **10+ Kubernetes microservices**.
- Developed a concurrent log streaming pipeline using Python subprocess and **POSIX I/O multiplexing**, integrated a **local LLM (Qwen 2.5)** for hybrid root cause analysis — achieving **92% accuracy** and reducing Mean Time to Recovery from **45 min to 23 seconds**.
- Designed an interactive AIOps dashboard with live KPI metrics, Plotly analytics charts, filterable log streams, and incident tracking — powered by **10 production SQL queries** across **58,000+ ingested logs**.

Course Recommendation System | Python, Pandas, NumPy, Scikit-learn, Streamlit, Git

- Developed a Python-based course recommendation application processing **80,000+** course records, with data cleaning, missing-value handling, text normalization, feature engineering, and metadata processing using **Pandas** and **NumPy**.
- Implemented a **hybrid recommendation pipeline** using **TF-IDF**, **cosine similarity**, and **weighted re-ranking** based on course popularity, ratings, recency, and category features; supported candidate retrieval and Top-K ranking.
- Built an interactive **Streamlit** web interface for query-driven recommendations and evaluated the system using ranking metrics, achieving **0.77 Precision@10** and **0.66 MRR**.

FaultCast | Python, TensorFlow/Keras, scikit-learn, Pandas, NumPy, Matplotlib

- Built a **predictive maintenance** system in Python using TensorFlow/Keras that processes **444K+** IIoT alarm events from 20 machines, trains a **Bidirectional LSTM with Attention** for multi-label classification (154 classes), achieving **0.70 AUC-ROC** and **90% label accuracy** on 59K samples.
- Implemented Focal Loss for class imbalance, learning rate scheduling, early stopping, and threshold tuning to forecast equipment faults **6–8 hours in advance** with cross-machine generalization across all **20 machines**.
- Extracted actionable failure patterns via **attention weight analysis**, n-gram mining, and transition probability matrices, identifying fault signatures (>50% probability) enabling an estimated **20–30% reduction** in unplanned downtime.

ACHIEVEMENTS

- Top 3** (out of **500+ teams**) — **INNOHACK 2025**, Robotics & AI Hackathon; built an **AI-powered resume platform** featuring ATS analysis, resume evaluation, job-role matching, and resume generation using Python, Streamlit, ML, and NLP during a 2-day team hackathon.
